

## Bronto Skylift S-XR

SKYWAYLIFTS.COM

# Get where you need to be

We believe in continuous improvements and are always aiming higher in our mission to provide the best solution for professionals working at heights. The XR range is a great example of our customer-oriented product development as it is designed by the operators for the operators.

Quite simply, our XR range machines do more for less. They reach higher and further, reduce operational costs and increase productivity. They have less weight and lower fuel consumption, as well as larger working envelope per gross vehicle weight tonne. And as always, your safety is of paramount importance. With Bronto Skylift platforms you can get where you need to be, and return home safely.

## XR key features

- Working height up to 230 feet (depending on model)
- Working outreach up to 131 feet
- Larger work envelope for maximum productivity
- Optimised transportation dimensions and weight
- Reduced cost of ownership
- Easy to use and precise Bronto+ control system
- Lifetime support to maintain high resale value

**Extremely reliable outreach.**  
You always know how far you can reach; this is not affected by external circumstances.

**Optimised transport dimensions for easy manoeuvrability on the road.**

**Larger working envelope for improved productivity**

**Reduced cost of ownership**

**The Sky-Jib with automatic and manual operation provide additional flexibility.**

**Fully variable jacking and fast automatic levelling. You get up in the air within minutes.**

**Various options from different cages and material handling devices to power outlets in the cage.**

**Modern service tools and a wide service network to guarantee the best possible uptime.**

## Added safety and efficiency

High safety does not decrease the efficiency, it does the opposite.

### Control system for added safety and ease

Safety is about creating a safer working environment. An advanced control system increases the safety on your worksites by letting you focus on the job at hand.

The unit includes a 5th-generation Bronto+ control system that provides precise and stable movements. It has a resistive touch screen and is very simple and smooth to operate.

For added safety, the cage control centre has also a crushing hazard protection for the operator.

### Easy and flexible user interface

Navigation through the control system has never been easier. The main menu has all the features and it can be modified by adding or removing icons much like in a smartphone.

Other features making day-to-day working easier include contextual help texts, integrated quick manuals, more detailed failure codes, simplified access to the cage load and easy control of the working lights.

Even the remote control has gone online and can now be equipped with an additional display with all the functions.

## It's all about the uptime

With the Bronto Skylift service tools you can maximise your uptime and reduce maintenance cost.

### We back you up

We want to keep your machines running with the best possible rate and keep their residual value. That's why we back you up from the first day through out the life cycle of your platform. When buying a new Bronto Skylift unit, you can trust that its spare parts are available for at least the next 25 years.

With the comprehensive training and service selection you can rest assured that your platforms are running at the best possible rate and keeping their residual value when it's time to renew your fleet. Widest service network in the industry keeps you backed up wherever you are.

### Service agreements

With Bronto Service agreement, you can be assured that your Bronto equipment is kept in the best possible shape for its entire lifecycle. The content of our mutual agreement is fully customised according to your needs and wishes.

This covers the annual inspections and service visits, but it can also be expanded to include other services such as more detailed inspections, other maintenance activities, and spare parts.

# Advanced IoT for steady performance

Connection between the platform and the database enables smooth, transparent communication.

## Skyliftfleet - manage your platforms

Skyliftfleet is an online portal that analyses and visualises the platform's data into user-friendly format. You can easily check and optimise the platform's usage, performance and maintenance cycles. All important manuals, information and for example service bulletins are stored here for easy access. There are different sections for different needs and it's possible to select different views for different people or organisations.

## Bronto Compass

Bronto Skylift Service personnel can open a remote connection to the platform with Bronto Compass. It enables real time communication with the machine for various settings, calibration, analysing and fault finding. With this tool, faults and their causes can be rapidly identified, analysed and corrected, which reduces downtime and unnecessary costs.

The screenshot shows the Bronto Skylift Fleet Management System interface. The top navigation bar includes 'My Fleet', 'Manage', 'Service', 'Introduktion', and 'Fleet'. The main dashboard features four donut charts representing performance metrics: 100% (3000+ monthly), 80% (2000+ quarterly), 20% (1000+ yearly), and 0% (3000+ yearly). On the left, there are input fields for 'Name' and 'Software version'. On the right, a sidebar lists 'Fleet management', 'Service reports', 'Service calendar', 'Maintenance documents', 'Surveys', 'Service contacts', and 'Current location'.

Bronto Skylift is a trusted global supplier of truck-mounted hydraulic platforms. We design, manufacture, sell and service appliances for rescue and firefighting as well as for industrial access. Our product range includes approximately 50 models with a range of 17 to 112 metres of working height. The advanced modularity also allows for numerous client-specific modifications. During the past 50 years, we have delivered over 7,000 platform units to fire brigades and industrial customers throughout all the continents in more than 120 countries. Our headquarters and production plants are situated in Finland. We also have subsidiaries in Germany, Sweden, Switzerland and the US. The company is part of the Japan-based Morita Holdings Corporation.
